

ABSTRACT

A luminous umbrella includes a power source, a switch, an electric wire, light emission objects, connectors and light permeable rods adapted to the umbrella comprised of a handle, a shank, ribs, spreaders, and a canopy with the power 5 source and the switch contained in the handle. The power source is connected to the electric wire via the switch. The electric wire is placed inside the shank and the ribs and connected to the light emission objects. Each of the ribs has a U-shaped profile with its U-shape opening side attached flush on the canopy for the canopy to conceal the electric wire put inside the rib. Another end of each 10 of the light permeable rods is exposed out of the canopy.
